Andrey Khataev

Senior Full-stack Engineer — Ruby on Rails, React, TypeScript

9+ years in Ruby, 20 years in software development. Clinical trial platform, fin-tech, mortgage pipelines. I own architecture and performance, with team lead experience.

SKILLS

- **Languages:** Ruby, JavaScript, TypeScript, SQL, PL/SQL
- **Frameworks and libraries:** Ruby on Rails, Roda/Sequel, Trailblazer, dry-rb, RSpec, React, React Native, Vue/Nuxt, Node.js
- **Databases:** PostgreSQL, MySQL, Oracle, Redis
- **Queues and background jobs:** Sidekiq (Redis), Sneakers/Kicks (RabbitMQ), Shoryuken (AWS SQS)
- **Infrastructure and DevOps:** AWS, Docker, GitLab CI/CD, GitHub Actions, Heroku, Render, Linux, Git
- **Architecture and practices:** REST API, microservice architecture, TDD, code review, Agile/Scrum

WORK EXPERIENCE

Sabbatical

`May 2026 – Present`

Node.js, Typescript, React, Ruby on Rails

A deliberate break over the summer, after five and a half years of continuous work on the same platform; alongside it, personal projects and learning AI-first development with the OpenSpec methodology.

Senior Full-stack Developer, Team Lead — Clario, TAP Mobile

`Oct 2024 – Apr 2026 | Remote`

React Native, TypeScript, Ruby on Rails, Sidekiq, Docker, GitLab CI/CD, MySQL, AWS

> **Context:** TAP is a clinical trial platform — 300+ trials, 30,000+ users, ~100 GB database that keeps the full change history of key entities and their attributes.

- Assembled the team for a new React Native mobile project (4 engineers) together with the engineering manager
- Designed the architectural foundation and base classes of the app with the team; while the team was forming, ran technical meetings on architecture and tech debt and documented the decisions
- Carried the parent product's development cycle and release practices over to the new project (trunk based development, release preparation and delivery)
- Set up Sentry, diagnosed and fixed sourcemap generation issues in the build pipeline
- Adapted a mobile app running against a session-based Rails API to the security team's requirements
- Integrated a dockerized Python microservice built by R&D to process dermatological images uploaded from the mobile app (Sidekiq), and set up its GitLab deployment pipeline
- Led the data recovery process after inadvertent data loss on production: data fully restored from backup, with localized downtime of roughly 5 working hours and one weekend day in the affected trials

Senior Full-stack Developer, Team Lead — Clario, TAP

`Dec 2022 – Oct 2024 | Remote`

Ruby on Rails, Sidekiq, MySQL, React, TypeScript, AWS

- Designed the backend architecture of a new reporting module, cutting report generation from minutes and hours down to seconds with a significantly better UX than the previous version
- Refactored the worklist module, making it more than twice as fast by denormalizing data and computing metrics as events happen instead of recalculating on the fly during index page load
- Built a performant data aggregation API for dashboards on the same principles

- On-call duties: release preparation, deployments

Senior Ruby Developer — Clario, TAP Oct 2020 – Dec 2022 | Remote

Ruby on Rails, Sidekiq, React, AWS

- Developed backend features: business logic in Trailblazer, API design, tests
- Redesigned the UI component for scheduling recurring tasks (report generation, data synchronization with external sources)
- Migrated legacy Backbone code to React
- Extracted a Roda/Sequel microservice from the Rails monolith (PoC)

Ruby Developer — Balance Platform LTD, Mortgage pipeline Dec 2017 – Sep 2020 | Moscow, Russia

Ruby on Rails, Sneakers/RabbitMQ, microservice architecture, PostgreSQL

- Designed and developed financial services for a mortgage pipeline
- Developed and maintained REST APIs
- Migrated a monolithic application to microservice architecture
- Developed and optimized SQL reports
- Built admin panels with ActiveAdmin
- Developed corporate Ruby gems and covered code with tests

Ruby Developer — Progress Soft LTD, Mortgage pipeline May 2017 – Dec 2017 | Moscow, Russia

Ruby on Rails, PostgreSQL

- Stabilized the backend of a mortgage pipeline that had reached early release in poor shape after a team change and rushed development
- Owned bug fixing and bringing the codebase back to a workable state

Ruby Developer — Sila Znaniya (Power of Knowledge) LTD, Electronic queue project Nov 2016 – May 2017 | Moscow, Russia

Ruby on Rails, Sidekiq, PostgreSQL, Drone CI

- Developed the backend and introduced testing practices to stabilize the codebase
- Set up and maintained CI/CD (drone.io) as a natural continuation of that effort
- Introduced user security policies (devise-security)

Stack transition: .NET → Ruby Jun 2016 – Oct 2016 | Moscow, Russia

Completed a professional Ruby on Rails course (Thinknetica, May 2016), built pet projects and searched for a first Ruby position.

Earlier experience — PSIT LTD (2006-2016), Bank Elektronika (2005-2006), Pension Fund of Astrakhan City (2004) Jan 2004 – Jun 2016 | Moscow / Astrakhan, Russia

C#, WPF, XAML, Oracle, SQL, PL/SQL, CruiseControl.NET

- 10+ years in banking software: developed modules of the 3Card-R retail banking system (including desktop clients in C#/WPF) and of the Rs-Bank system
- Wrote Oracle stored procedures (PL/SQL) for bulk data processing and export: automated screening of the client base against unwanted-client and extremist lists, exports to the State Tax Body
- Built SQL reporting
- Set up and maintained CI (CruiseControl.NET)
- Started out in IT support at the Astrakhan Pension Fund office alongside university studies

SIDE PROJECTS

Eazy NDFL — tax reporting automation for Russian investors in foreign assets (2021 - Present)

Ruby on Rails, Vue/Nuxt/React, Sneakers/RabbitMQ, dry-rb, Heroku/Render/Dokku, GitHub Actions

Co-founder, responsible for the entire technical stack: backend, frontend, cloud infrastructure. 2,000 users and 1,500 completed orders and filed tax declarations since 2021.

HMBee Bot — automated import of bank transactions into a personal budgeting service (2026)

TypeScript, Node.js, zod, json-logic-js, Vitest, Biome

TypeScript CLI that automates importing bank transactions into a personal budgeting service Honey Money. Built with the OpenSpec methodology — specification as the source of truth.

EDUCATION

Bachelor's in Applied Informatics in Economics
Astrakhan State Technical University, Astrakhan, Russia
Graduated: Jun 2005

CERTIFICATIONS

- **Professional Ruby on Rails development**
  Thinknetica (Moscow, Russia, online) — May 2016
- **Machine Learning (certificate)**
  Stanford University / Coursera — May 2015
  Certificate
- **CS169.1x / CS169.2x: Software as a Service**
  University of California, Berkeley / edX — Nov-Dec 2013 — certificates part 1, part 2

Letter of reference from the Director of Technology and Innovation at Clario available on request.
